

The Toolkit

This toolkit is an introduction to gender-inclusive mobility planning, meant to serve as a resource for designers, planners, and policymakers seeking to integrate gender-inclusive mobility into the planning and design process. The toolkit aims to collect and distill existing information in order to:

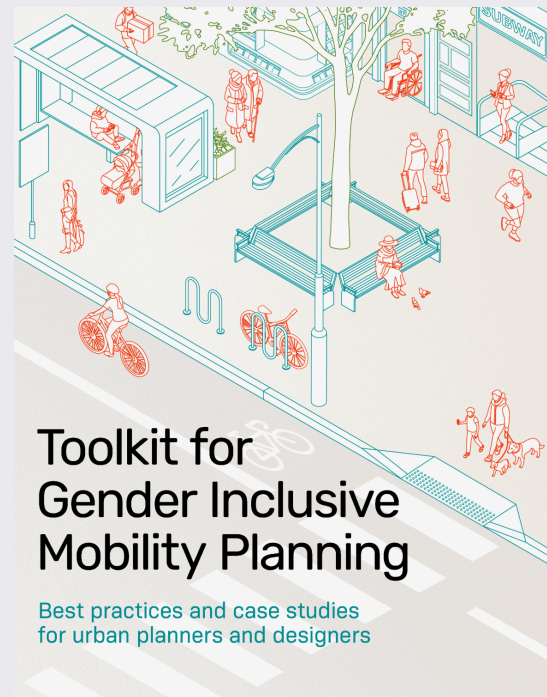

Understand the Problem – How transport and mobility systems systematically underserve women, gender minorities, and girls.

Provide Practical Solutions – How gender-inclusive planning can be applied at each stage of the urban planning and design process.

Discuss Real-World Applications – Case studies from municipalities in the European Union, United Kingdom, and United States featuring topics like human-centered design, safe streets, and the 15 minute city.

The scope of this toolkit was shaped by the [German Chancellor Fellowship](#), and focuses on Germany, the U.S., and nearby European contexts.

TOOLKIT

How to Navigate the Toolkit

The toolkit mirrors key phases of the urban planning process, including:

1. Visioning & Scoping

Establishing a shared vision and goals

2. Data Collection & Analysis

Closing the gender data gap

[Home](#) [Toolkit](#) [FAQ](#) [Contact](#)

3. Public Participation

Focusing on community-based research

4. Design & Implementation

Co-designing for safety, function, and enjoyment

Practitioner Guide

Ensuring longevity and project success
The Practitioner Guide is a condensed version of the full toolkit, designed for users who need a concise review. It highlights the key points and recommendations, allowing readers to quickly grasp and apply key guidance without reading the entire toolkit.
