

Complete Streets Technical Assistance

CSTA Public Outreach

Complete Streets are designed to ensure the safe and adequate accommodation of all users of the transportation system, including pedestrians, bicyclists, public transportation users, children, older adults, individuals with disabilities, motorists, and freight vehicles. The NJ Department of Transportation and the US Department of Transportation promote the adoption of Complete Streets standards and policies.

The Complete Streets Technical Assistance Program (CSTA) supports municipalities by providing them with the knowledge, skills and resources to develop Complete Streets-related solutions. Technical assistance is funded by the

NJTPA and provided through a partnership with Sustainable Jersey and the Alan M. Voorhees Transportation Center at Rutgers University. Selected participants receive free direct technical assistance to complete a specific task related to advancing a Complete Streets initiative in their community. No direct funding to municipalities is provided.

FY 2026 Program

Four municipalities are receiving technical assistance:

Fort Lee is conducting a Complete Streets corridor assessment focused on a half-mile segment of Main Street in the heart of the borough's central business district. The assessment will document existing conditions, explore potential improvements, and develop recommendations to enhance safety and accessibility for people walking, biking, driving, and using transit, while also identifying opportunities to reduce stormwater runoff along the busy corridor.

Leonia Borough is conducting a Complete Streets neighborhood assessment to identify appropriate locations for traffic calming and safety improvements. The assessment will focus on local north-south roads and other areas impacted by significant cut-through traffic related to the borough's proximity to the George Washington Bridge. The project will document existing conditions, engage local stakeholders, and develop

recommendations to improve safety for residents, pedestrians, cyclists and drivers.

Pompton Lakes is conducting a Complete Streets corridor and neighborhood assessment along Wanaque Avenue in the borough's downtown center. The assessment will explore opportunities to improve safety, walkability, bicycle access, stormwater resilience, and overall downtown vitality. The project will document existing conditions, engage community stakeholders, and develop recommendations that reflect the unique needs and character of Pompton Lakes.

Ship Bottom is developing a bicycle corridor plan to explore cycling route alternatives to Long Beach Boulevard, the primary north-south roadway through the borough. The plan will develop bike improvement recommendations and will place particular emphasis on wayfinding and signage to guide visitors, seasonal residents, and bicycle commuters to the best routes.

Completed Projects

2024-2025

In 2024-2025, five municipalities received technical assistance. Projects in

2022-2023

In 2022-2023, seven municipalities received technical assistance.

Belleville and Verona included temporary demonstration projects.
