Hub Bound Travel Data

Analysis and visualization of [NYMTC's "Hub Bound Travel" reports](#) — vehicle and passenger volumes into Manhattan's Central Business District (below 60th St), 2014–2024.

Reports are also mirrored in [Hudson County Complete Streets' Google Drive](#).

Charts

 **NJ→NY (entering) NY→NJ (leaving)**
 

Each GIF cycles through peak 1hr, peak period (3hr), and 24hr views. Click to open the interactive chart.

Flow Map

 **NJ→NY (entering) NY→NJ (leaving)**
 

Geographic Sankey of CBD crossings and ferry routes. Ribbon widths are proportional to passenger counts; flows merge/split at the ferry interchanges. Hovering or pinning a flow brings it to the top of the z-stack persistently.

NJ→NY NY→NJ
Peak 1hr
Peak period
24hr

Data

 8 normalized JSON files extracted from NYMTC AppendixII and AppendixIII Excel workbooks, totaling ~133k records. All extractions are idempotent, DVX-tracked, and cached to S3.

File	Records	Source	Description
crossings.json	528	Tables 14A-C, 15A-C	NJ sector per-crossing volumes by mode, direction, time period
modes.json	165	Quick Reference Table	NJ sector day volumes by mode
vehicles.json	2,158	Tables 16-17	All 4 sectors, per-crossing motor vehicle + bus counts
bus_passengers.json	1,191	Tables 18-19	All 4 sectors, local/express bus passenger counts
hourly.json	8,736	Tables 21A-27	Hourly profiles by mode, sector, and aggregate category
peak_accumulation.json	148	Tables 21B-23B	Peak persons in Manhattan Hub, 1973–2024
appendix_iii.json	17,606	AppendixIII A-F	Sector-level hourly data (bus, subway, rail, ferry)
appendix_iii_detail.json	102,581	AppendixIII B-G	Per-facility/line hourly data (subway lines, rail, roads, bikes)

See [specs/extraction.md](#) for full schema documentation and extraction notes.

Visualizations

 The [web app](#) has 6 interactive views — the Plotly charts use [Plotly.js](#) / [pltly](#); the flow map uses [MapLibre GL](#) + [geo-sankey](#):

Chart	Description	Controls
Unified Chart	NJ→NY crossings: bubble scatter, grouped bars, stacked %, recovery index	View, direction, time period, granularity, palette
Flow Map	Geographic Sankey ribbons over a basemap of NJ↔Manhattan, width-proportional to passengers per crossing/mode (incl. multi-source ferry network)	Direction, time period, year, inline-legend, geo-scale, width-scale, hover-padding
Hourly Profile	Stacked area of CBD entries/exits by hour	Mode vs sector, direction, year
Mode Share	Stacked bar of daily persons by mode across years	Absolute vs %, direction
Sector Vehicles	Motor vehicles by sector (stacked or grouped bars)	View, direction, time period
Peak Accumulation	50-year timeline of max persons in Manhattan Hub	(annotated, no toggles)

Plotly charts support legend hover highlight and click-to-solo via [pltly](#); the flow map highlights on hover and pins on click, with the most recently engaged flow drawn on top.

Extraction

```
pip install -e .
./extract.py extract      # Extract all tables → data/*.json
dvc push                  # Push to S3 cache
```

Requires the source Excel files in data/source/ (see .dvc files for provenance).

Web app

```
cd www
pnpm install
pnpm dev                # Dev server on port 3847
```
