

What is NJTA hiding?

We've been combing through hundreds of pages of documents about this terrible project.

The [Open Public Records Act \(OPRA\)](#) says that the general public is entitled to access government documents and reports. NJTA, however, was not so agreeable. Get ready for a lot of redactions.

Enjoy what we've uncovered and learned ...

The (heavily) redacted documents ...

Jacobs Engineering reports

- [OPS T3634 NB-HCE Needs Assessment and Alternatives Study](#)
- [Appendix A - Servicable Life Rating](#)
- [Appendix B - Structures Workshop](#)
- [Appendix C - Historical Boring Logs](#)
- [Appendix D - FAA Aeronautical Studies](#)
- [Appendix E - Existing & Future Traffic Volumes](#)
- [Appendix F - Demolition and Rehabilitation Costs](#)
- [Appendix G - Alternatives Considered](#)
- [Appendix H - Rail Vertical Clearance Requirements](#)
- [Appendix I - Recommended Alternative](#)
- [Appendix J - Phase I Environmental Assessment](#)
- [Summary presentation](#)

Miscellaneous

- [NJTA's application to the US Coast Guard for Newark Bay Bridge replacement](#)

- [NJTA's Harbor Ops steering committee presentation](#)

An obvious first impression

Why do engineering reports need to be redacted? Shouldn't they be technical, but not necessarily highly controversial and confidential documents?

Perhaps it is worth noting that the redactions were for ...

- all summary and recommendation sections
- which parcels of land would need to be acquired and demolished for the wider urban highway
